

EDUGENIE — PERFORMANCE TESTING

Test scope

API validation, module behavior, request/response handling and integrated browser workflow.

Automated tests

Health endpoint behavior.

Q&A endpoint with mocked AI output.

Summary input validation.

Quiz response structure.

Module-level validation and JSON parsing.

Performance considerations

Gemini latency depends on network/provider response time. The local explanation model has initial load cost and can reuse the cached model in later requests within the environment.

Run

```
pytest -q
```
